
Title: Starry Sciences

Author: Selsius the Astronomer

(Excerpt by Selsius the
Astronomer)

...Moongates, despite their
beauty and mysterious
qualities, are explainable
through science. One need
not rely on magicians and
monks and others who
place faith in, well,
merely faith.

If you study moongates
closely, you'll find they
behave in a predictable
fashion, follow specific
laws of nature, have no
special resistance to
scientific experimentation,
and can be manipulated as
desired by one with the
proper knowledge.

Moongates, like any
everything else in nature,
can even be broken, which
is perhaps the perfect
evidence that they are
not the product of the
divine. If you ask a
certain monk, who happens
to be a close friend of
mine, what his opinion of
Moongates are, he'll tell
you they are a gift from
above, created by powers
mankind cannot
comprehend.

I say if I have the power
to break a moongate, and
to fix a moongate, and
to tell it what to do,
and where to send people,
then either I am a power
mankind cannot
comprehend or Moongates
